			Source of water from the Main floor to be used with no Janitorial room on the second floor

Incident:

Report for Water spill from the bucket.

While carrying a bucket of water and climbing the stairs, I unfortunately missed a step and had water splash from the bucket to carpet flooring on the second floor. During the missteps the bucket of water spilled. I took immediate action by informing my supervisor and began cleaning up the spill right away. I used the water sink to drain most of the water; however, some had already spread, which we believe led to the damage in the washroom.

We immediately Vacuumed the areas covered by the corner and made sure the entire area was dry, We also noticed that the water had gone through to tile and noticed wet areas. We lifted the tile to make sure there is no water holding on the ceiling. We left drying to make sure the area was dry
